JOB DESCRIPTION

COMPANY	OMEX Environmental Ltd.
MAIN SITE	Sutton Bridge
JOB TITLE	Laboratory Technician
CONTRACT TERMS	Full time, Permanent

COMPANY

At OMEX we strive to optimise life's essentials, operating across key food, energy and water markets, helping people and planet thrive for generations to come.

We do this through cutting edge, science-driven solutions that nourish soils and crops, power cleaner energy and purify water, turning vital resources into resilient systems to ensure we can all flourish in a changing world.

As a family run business we're committed to supporting and championing our people, providing exciting opportunities to make a real difference throughout our food, energy and water sectors.

OVERVIEW OF ROLE

As a laboratory technician you will have the opportunity to work in a dynamic environment, broaden your analytical and chemical product development skills and experience working in the laboratory of a first-class chemical manufacturer. For the right candidate there may be possibilities for future career advancement within a growing team.

We are looking for an organized, self-motivated, enthusiastic and disciplined team member to assist in the laboratory practices at our Kings Lynn site.

KEY RESPONSIBILITIES

1. Preparation and Chemical Analyses of samples and reporting of results
2. Other Laboratory work depending on business requirements.
3. Equipment troubleshooting, maintenance and housekeeping
4. Quality control of production samples
5. Evaluation of raw material samples
6. Working in accordance with good laboratory practice and guidelines
7. Labelling and storage of samples
8. Assist in developing new formulations
9. Assist in developing and testing of new products
10. Assist with lab-scale and pilot plant scale product performance simulations
11. Engage actively in the implementation and maintenance of ISO 17025.
12. Engage actively and assist in the continuous laboratory performance optimization
13. Assisting in general laboratory duties such as stock control and ordering of chemicals etc.
14. Assist in project work to improve product performance

QUALIFICATIONS, SKILLS & EXPERIENCE

- A degree in chemistry, biology, chemical engineering or of similar disciplines is essential (will consider HNC or HND etc)
- General applied chemistry knowledge is essential, producing reliable test results
- Excellent analytical skills

- Demonstrable capability of working with complex mixtures.
- Experience in using inductively coupled plasma (ICP), gas chromatography (GC) and segmented flow analyser (SFA) units is an advantage but not essential as training will be provided
- Experience in analysis of biological wastewater and anaerobic digestion samples is an advantage, but not essential as training will be provided.
- Successful development and timely completion of self-directed projects
- Knowledge of MS Office (Word, Excel, Outlook) is essential.
- Experience with engagement in ISO 17025 preferred.
- Experience with Laboratory Information Management Systems preferred
- Effective communication at all levels
- Ability to communicate and effectively deliver accurate laboratory results.
- Excellent time management and organisational skills
- Be a good team worker demonstrating loyalty and commitment to the Company and other team members
- Self-motivated, energetic, dependable with a clear attention to detail and able to work independently
- Be flexible with working hours when required in order to deliver the service required by our customers
- Full UK Driving Licence
- A team player with a strong fit to the OMEX vision & values (see below).
