JOB DESCRIPTION

COMPANY	OMEX Environmental Ltd.
MAIN SITE	Bardney
JOB TITLE	Maintenance Engineer
CONTRACT TERMS	Full time, Permanent

COMPANY

At OMEX we strive to optimise life's essentials, operating across key food, energy and water markets, helping people and planet thrive for generations to come.

We do this through cutting edge, science-driven solutions that nourish soils and crops, power cleaner energy and purify water, turning vital resources into resilient systems to ensure we can all flourish in a changing world.

As a family run business we're committed to supporting and championing our people, providing exciting opportunities to make a real difference throughout our food, energy and water sectors.

OVERVIEW OF ROLE

As maintenance engineer you will be instrumental in maintaining operational efficiency of our manufacturing processes, fostering a safe working environment and driving continuous improvements
The role will cover all aspects of maintenance on a chemical mixing facility including involvement in onsite capital equipment installation, improvement modifications and making sure service records and routine testing is kept up to date. In return you will become a key member of a small but very effective multi-skilled team and will have the opportunity to further yourself and develop professionally.

KEY RESPONSIBILITIES

1. Reporting to Production Manager
2. Manage engineering parts stock levels and co-ordinate timely procurement of parts from suppliers.
3. Maintaining Production equipment
4. Implementation and maintaining of equipment logs and relevant maintenance schedules
5. Support with onsite health and safety within the Environmental production area including issuing various permits as required
6. Ensure flexibility to be able to assist in supplying engineering support across the overall business if required.
7. The company may require you to help in other sections of the group companies, carrying out other work and other duties as the workload requires, which may involve working at other company sites.

QUALIFICATIONS, SKILLS & EXPERIENCE

- Educated to apprenticeship level NVQ 3 or hold a recognised engineering qualification
- 3 years minimum experience as a maintenance engineer in a manufacturing or continuous process environment
- Strong working knowledge of mechanical maintenance techniques
- Problem solving skills.
- Excellent communication skills
- Able to work on your own initiative as well as with other members of the production team.
- Prepared to help with production if required.
- A team player with a strong fit to the OMEX vision & values (see below).

OUR **VISION**
Our vision is to optimise life's essentials: food, energy and water, so people and planet can thrive for generations to come.

OUR **VALUES**	
	**Embrace The Challenge. See The Opportunity.**
	**Do The Right Thing. Always.**
	**Be In It For The Long Term.**
	**Roll Up Your Sleeves & Pursue Excellence.**
	**Grow Together. Whatever The Weather.**
