

Bio Block

Biological fat and grease treatment

Bio Block is a water soluble product that gradually dissolves over a 30 – 90 day period. The slow release provides a continuous supply of high performance bacteria that will break down fat and grease permanently.

- Bio Block keeps the bacteria where you want them to work
- Overcomes the problem of unreliable manual application
- Avoids the difficult and expensive installation of mechanical dosing
- Reduces foul odours such as Hydrogen Sulphide and Mercaptans

Application

The bacteria in Bio Block are able to reduce the build-up of fat and grease across a wide range of applications and is ideal for situations of high water flow, difficult access points and isolated locations.

Directions For Use

Bio Block is easily and safely installed by suspending the block into the water flow. This makes it practical and cost effective for use in multiple areas of varying flow such as connecting drains or sewer systems.

Specifications

Pack Size: 4 x 5 Kg per box
