

**DE-ICER
NAAC**

Cryotech NAAC

De-Icer

NAAC is a unique anhydrous sodium acetate based solid deicer. It's spherical shaped pellets make accurate application very simple and it has a very low environmental impact, compared to urea pellets. Unlike some other deicers which can actually reduce the solution temperature as they dissolve, as NAAC dissolves during deicing it creates heat, speeding up the deicing process.

Application

NAAC is ideal for areas inaccessible to sprayers applying Isomex and can even be applied by hand, being a light, dust free material which is pleasant to handle.

Cryotech NAAC meets FAA-approved specification SAE AMS 1431 for deicing and anti-icing compounds in the form of a solid for use on runways and taxiways

Pack Size

- **25 kg poly bags**

- **500 kg Super Sacks**
