

Company	OMEX Environmental Ltd.
Main Site	Sutton Bridge
Job Title	Dosing Systems Engineer
Contract Terms	Full Time, Permanent

OMEX

OMEX is a dynamic group of companies operating throughout the world, specialising in complex liquid formulations for use in industries, ranging from agriculture to energy. OMEX Environmental Ltd, part of the OMEX group develop, manufacture and supply micronutrients for biogas plants, wastewater treatment solutions including dosing systems and deicers in the UK and internationally. This is a family run business founded in 1976. The company treats its' employees very much as part of their extended family, greatly valuing their contribution towards its' continued success and growth.

OMEX Environmental has an opportunity for the role of Engineer electrical or mechanical in a fast paced and varied role working predominantly with chemical dosing systems.

Overview of Role

The role will cover the build and manufacture of our dosing units within a workshop environment along with organising the delivery/installation and commissioning of our in house produced systems. There will also be R&D work on new and bespoke systems to accommodate complex liquid formulations we supply and manufacture along with project work at our other production and storage facilities as and when required. In return we will offer a competitive salary. You will become a key member of a small but very effective multi-skilled team and will have the opportunity to further yourself and develop professionally.

Key Responsibilities

- Report to Dosing Systems Project Manager
- Construction, inspection, delivery and installation of dosing systems
- Manage stock control levels and co-ordinate timely procurement of parts from suppliers
- Process customer orders accurately, maintaining associated spreadsheets and folders
- Implementation and maintaining of equipment logs and relevant maintenance schedules
- Support with onsite health and safety within the Environmental production area including issuing various permits as required
- Support the Project Manager in producing and delvoping dosing systems
- Ensure flexibility to be able to assist in supplying engineering support across the overall business when required

Qualifications, Skills and Experience

- Time-served apprenticeship in mechanical, electrical or industrial maintenance engineering
- 3 years minimum as a maintenance engineer in a manufacturing or continuous process environment
- Experience in dosing systems, sewage treatment works, anaerobic digestors or industrial operations would be beneficial.
- Strong working knowledge of mechanical and electrical maintenance techniques
- Ability to read and interpret engineering drawings, wiring diagrams and P&IDs

- Familiarity with industrial equipment and PLC knowledge would be an advantage
- Excellent communication skills

The company may require you to help in other sections of the group companies, carrying out other work and other duties as the workload requires, which may involve working at other company sites.

Preferably live within 30 minutes of Sutton Bridge, Spalding

Pay: From £40 – 45k per year

Additional pay:

- Discretionary Company bonus scheme

Benefits:

- Company events
- Company pension
- Lunch allowance
- Access to company vehicle
- Private medical insurance
- Sick pay

Schedule:

- Monday to Friday
- 7.45am-4.45pm (with flexible hours where necessary to fulfil the job role)
-
- UK nationwide travel will be required with occasional fully expensed overnight stays

Vision Strategy

**Omex:
Optimising
Life's
Essentials**

Our vision is to optimise life's essentials – food, energy and water – so people and planet can thrive for generations to come.

We do this through cutting edge, science-driven solutions that nourish soils and crops, power cleaner energy and purify water – turning vital resources into resilient systems to ensure we can all flourish in a changing world.

Values	
Be in it for the long term.	The best results come from long lasting relationships. So, think beyond the quick win. Invest in trust. Be there, be steady. And create value that endures.
Embrace the challenge, see the opportunity.	A challenge is simply opportunity in progress. With curiosity, agility and a can-do mindset, we turn obstacles in better ways forward for our colleagues, customers and communities.
Roll up your sleeves & pursue excellence.	We're all in and committed to quality. We bring energy, passion and high standards to everything we do. By giving our best and working as a team, we deliver excellence that helps our world thrive.
Grow together, whether the weather.	Storms pass, but strong partnerships endure. We learn continuously, support each other, and grow stronger by sticking together through every season.
Do the right thing. Always.	We put people first – customer, colleagues, and partners. Acting with integrity empathy and respect, even when it's hard is how we earn trust and build lasting relationships.
